Use the directory at the end to return to the tools you need.

THE FOUNDATION

Experience behind the path

Toriano Riddick Jr. | Founder & Principal Consultant

A practical point of view

RiddickanCo, LLC connects quality-system support, professional development and workforce opportunity. MOVARA brings the learning and career tools together so people can recognize the work they know, develop new skills and show what they can do.

Built around real work

Toriano's background includes eight years in U.S. Navy aviation quality, inspection and instruction, followed by regulated food-manufacturing and nuclear/energy quality roles. His contract ISO 9001 registrar audit experience includes Stage 1 and Stage 2, recertification, surveillance and scope-extension assignments.

Capability that carries across sectors

Process-based audit planning; requirement-to-evidence traceability; supplier and outsourced-process controls; inspection, measurement and document control; corrective-action effectiveness; competence and training; and management-review preparation.

One boundary matters

Consulting and learning support are scoped separately from independent certification auditing. Acceptance depends on fit, competence, confidentiality and auditor independence. An independent certification body makes certification decisions.

[View founder résumé](#)

[View capability statement](#)

Public professional background is summarized from the founder's résumé and capability statement. Client names, controlled records and private assignment details are omitted.

Start free. Make something useful.

Three self-paced courses. Nine practice labs. A tangible result from every course.

Professional Communication & Confidence

About 45 minutes. Practice a reliable status update, a clarifying question and useful feedback. Leave with language you wrote and can adapt to your own work.

Quality Thinking & Evidence

About 50 minutes. Identify the requirement, separate observation from interpretation and test whether a fix held. Build an evidence note and a follow-up question.

Data Decisions & Digital Workflow

About 50 minutes. Define a metric, check a practice table and explain a result with its limits. Build a small data story someone else can follow.

Earn the completion record honestly

Complete the three lessons and applied challenge for a course, then create its dated RiddickanCo completion record. This is a self-paced learning record; it does not establish professional certification, auditor registration or authorization to conduct certification audits.

[Start the free courses](#)

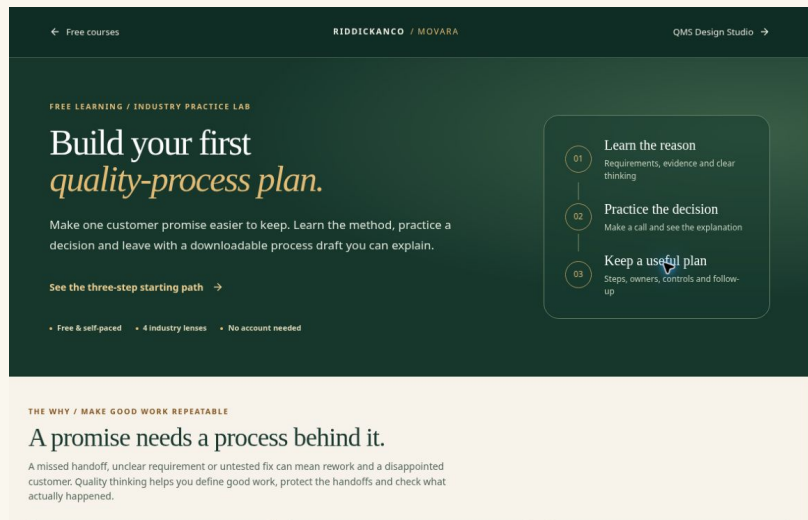

[Begin with Quality Thinking & Evidence](#)

Progress saves in this browser. Export your course record for backup before switching devices or clearing browser data. These are free original learning resources, separate from the paid catalog.

02 / PRACTICE THE DECISION

Put quality into familiar work.

Industry Practice Lab turns abstract ideas into a decision you can explain.

Actual Industry Practice Lab screen. Tap the image to open the live tool.

Choose your industry lens

Production & manufacturing • Service & customer operations • Education & training • Technical & digital services. Explore 16 original scenario cards across the four lenses.

Answer first. Then examine why.

Choose a response before revealing the explanation. Revisit a missed decision and translate familiar workplace language into requirements, controls, evidence and improvement.

Build one process you can keep

Use the 12 prompts for a business or practice name, process, input, steps, output, owner, requirement, risk, control, evidence, measure and improvement. Download the text plan, editable backup or QMS starter to continue.

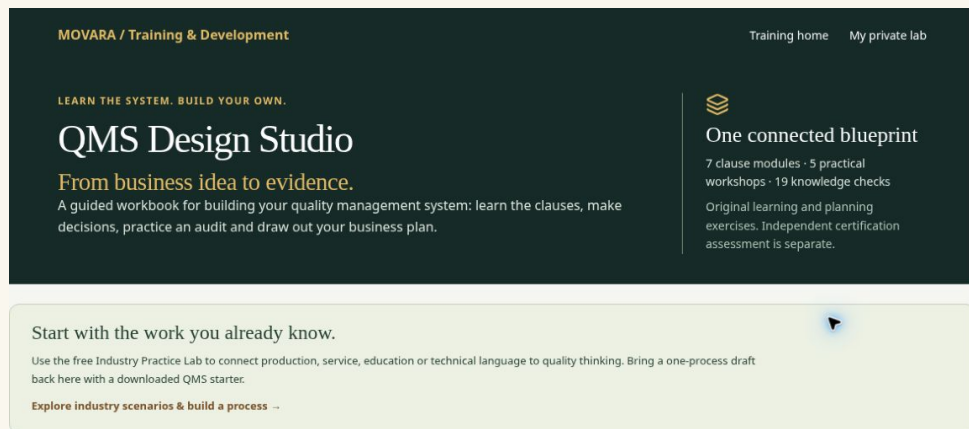

Open the Industry Practice Lab

No account is needed. Examples are fictional. Practice results and drafts stay in this browser and do not automatically sync to your member lab. A planned record is not verified evidence.

03 / BUILD A STRONGER SYSTEM

From one process to a blueprint.

QMS Design Studio connects the learning to a broader business system.

Actual QMS Design Studio screen. Tap to explore the workbook.

Work through the system

Seven clause modules, five practical workshops and 19 knowledge checks connect process planning, contract review, supplier rating, design responsibility, sampling and audit planning. Keep fictional practice and your business draft separate.

Prepare for the right question

Stage 1 preparation asks whether the system and organization are ready for the next audit. Stage 2 examines implementation and effectiveness. Prepare evidence, owners and follow-up dates; the certification body sets the actual program and decisions.

Keep the reference and the record clear

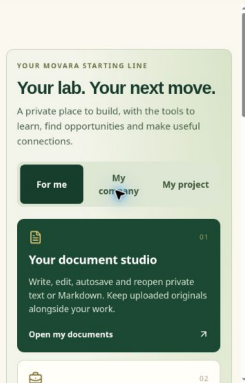

The detailed lessons use ISO 9001:2015 + Amd 1:2024. Confirm the applicable edition and transition arrangements before real use. Sign in and save for account-private storage. Download a JSON backup, TXT blueprint or browser-print PDF.

Open QMS Design Studio

Signed-out work is a temporary preview. A filled workbook is a learning draft, not a validated enterprise QMS, conformity score or certification-readiness guarantee. Keep restricted and sensitive records out.

Your lab. Your next move.

One private starting point for your career, company or project.

PRIVATE BY DEFAULT

Create a useful place to come back to.

Editable notes. Saved versions.

Practical plans. Your own next step.

Actual member-lab mobile view. Sign-in is required.

Write, save and return

Create and edit plain text or Markdown with online autosave and saved versions. Reopen account-private work on another device. Wait for Saved before closing and keep a downloaded backup.

Use the right kind of file

Store PDF, TXT and Markdown originals with file versions. Make editable copies of TXT or Markdown. PDFs and Office files need an appropriate external editor; they are not edited here.

Choose a useful next action

For me links to learning, jobs and résumé tools. My company connects to people, companies, job-posting tools and QMS work. My project brings process-building and working plans together.

Keep sharing intentional

Review optional public profiles and job postings before publishing. Company contacts use chosen business links. The Lounge is public, with no private B2B messaging.

Open my private member lab

This is a lightweight planning space. Keep your own backups. Do not upload restricted client material, CUI, secrets, medical records or other sensitive data. Course/Industry Lab browser drafts do not automatically transfer here.

Show the work you can support.

A clearer résumé starts with a truthful inventory of your experience.

1. Name the work, then the title

Write what you actually did, your responsibility, the method you used and a result you can explain. Military, manufacturing, service and project experience often share practical skills; make the connection explicit.

2. Separate experience from practice

Keep real employment, completed training and fictional learning projects in their own categories. A scenario may demonstrate your thinking, but it is not client work, audit experience or an earned professional credential.

3. Prepare a focused application

Use the guided résumé tools and application desk to organize factual copies, save job links and track next steps. Check each opportunity on its original site and apply there yourself. Job searches and member listings are not verified hiring commitments.

4. Find people and the next skill

Browse opt-in professional and company cards, explore career pathways and workforce resources, and choose a training step based on the role you want. Review exactly what becomes public before sharing a profile or contact card.

[Build a factual résumé](#)

[Explore jobs and application paths](#)

[Browse career pathways](#)

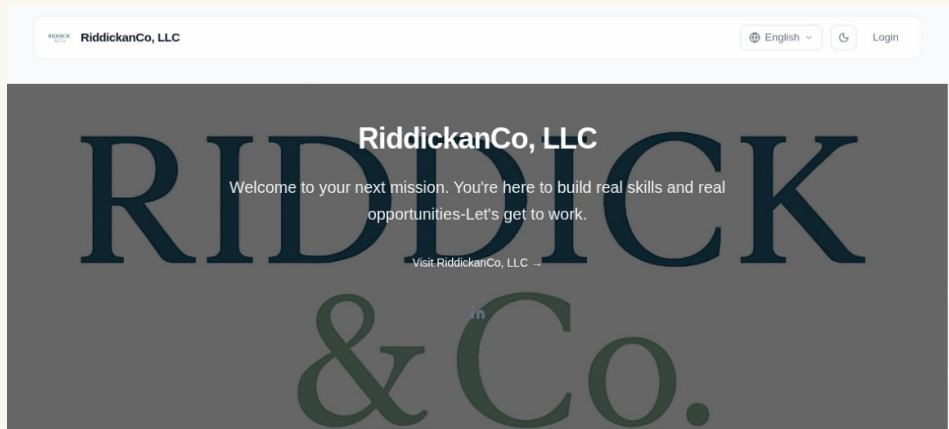

[Use My Next Move for Veterans](#)

No placement or employment outcome is guaranteed. Verify job requirements, provider eligibility and costs at the original source. Never invent results, qualifications or audit days.

06 / CHOOSE DEEPER STUDY

Match the training to the goal.

Paid ISO training is a separate next step. Choose it deliberately.

Actual training-catalog screen. Current course details control.

ISO 9001:2015 Requirements

Build your foundation in the selected standard. The current Requirements listing is a non-accredited option. Review the exact syllabus and certificate terms before enrolling.

ISO 9001:2015 Internal Auditor

Study the planning, conduct, reporting and follow-up of internal audits. Choose the available format that fits your learning needs and work schedule.

ISO 9001:2015 Lead Auditor

Explore broader audit-team leadership study. Course completion is one part of development; experience and any applicable registration requirements are separate.

[Requirements course](#)

[Internal Auditor course](#)

[Lead Auditor course](#)

The catalog includes self-paced, live virtual and classroom options, varying by course. Confirm price, edition, dates, prerequisites, assessment, certificate issuer and recognition for the exact option. Do not assume all catalog courses are accredited.

Find the gap. Agree the next step.

Three quote-based ways to strengthen the work behind your customer promise.

Gap Analysis & Audit Readiness

An agreed-scope review of documents and records, process-owner conversations as scoped, an evidence-based gap report with priorities, and a Stage 1/Stage 2 preparation action plan. One-time assessment with follow-up available.

Routine QMS Checks & Review Meetings

Focused checks in agreed areas, review of actions, measures and change, a working team meeting, and an updated action log with owners and priorities. Monthly or quarterly options depend on scope.

QMS Support Retainer

A defined support plan and cadence, scheduled working meetings, agreed document/action support, and progress summaries with next-step reviews. Term, hours and deliverables are tailored to the engagement.

Start with a useful scope

Share your industry, process boundaries, goals and preferred dates. A fit and independence check comes first. Toriano reviews and approves conclusions before delivery. Scope, deliverables, timing and price must be agreed before work begins.

[Explore services and request a quote](#)

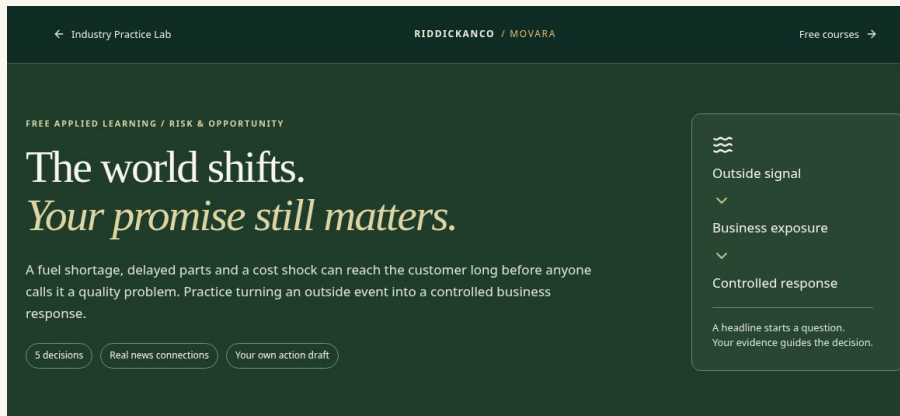

[Or email your inquiry](#)

Preferred dates are requests, not bookings. Consulting does not award ISO certification or guarantee an audit result. Certification audits and decisions remain with an independent certification body.

08 / MAKE THE PATH YOUR OWN

One month. Four useful outputs.

An adaptable starting plan, not a promise about time to qualification.

Actual Supply Disruption Lab screen. The contract and case figures are fictional.

Week 1 / A clear evidence note

Complete Quality Thinking & Evidence. Write one requirement, one observation and one question that could change your conclusion.

Week 2 / A one-process plan

Practice four cards in a relevant industry. Build the process draft and export a backup. Ask a competent, authorized person for feedback separately.

Week 3 / A stronger explanation

Revise the plan or résumé with the feedback. Try the Disruption Lab to connect an outside event, business exposure, decision authority and a controlled response.

Week 4 / A next-step decision

Choose deeper training, a QMS blueprint or a scoped support conversation. Set an owner and date for the next real-world check, and keep an honest record of your role.

Practice a supply-disruption decision

With appropriate authorization and supervision, test what you have learned in real work and examine later results. Automated scenario explanations and self-review are not an instructor assessment.
